Summary

Computer engineer and full-stack developer who builds mobile apps and the backends behind them. Shipped Daftari, an Arabic offline debt-ledger app for shopkeepers, on Google Play, and co-built a multi-tenant ASP.NET Core API as a graduation project. Works in Kotlin and Flutter on the client, Python (FastAPI, Django) and .NET (ASP.NET Core) on the server, with PostgreSQL and SQLite underneath.

Education

B.Sc. Computer Engineering

Islamic University of Gaza · expected 2027 · GPA 83.06 / 100

- Graduation project: MultiTenantManagement, a multi-tenant ASP.NET Core API built by a team of five (listed under Projects).

Skills

Area	Skills
Mobile	Kotlin (Android, Jetpack Compose, Room), Flutter and Dart (Riverpod, GoRouter, Dio), Firebase Auth and Messaging, Google Play publishing

Area	Skills
Backend	Python (FastAPI, Django, Django REST Framework, SQLAlchemy, Alembic, asyncpg), C# (ASP.NET Core Web API, Entity Framework Core, ASP.NET Identity)
Databases	PostgreSQL, SQLite
APIs and realtime	REST, JWT authentication, WebSockets, Postgres LISTEN/NOTIFY
Infrastructure	Linux VPS deployment, systemd services, Caddy TLS, Docker, Windows services, PowerShell
Languages	Python, Kotlin, Dart, C#, C
Tools	Git and GitHub, Android Studio, Gradle, pytest

Projects

Daftari

Android app; Kotlin, Room/SQLite; Aug 2026 to present; [Google Play](#), [Website](#)

- Built an offline-first, Arabic-only debt ledger for shop owners: debts, payments, balances and statements in Room/SQLite; shekel, dinar and dollar kept separate.
- Shipped on Google Play with a Play Billing subscription; ledger data leaves the phone only via opt-in Google Drive backup.

Phone

Android default dialer; Kotlin, Jetpack Compose, Room, Vosk; Oct 2026; private repo

- Built a replacement dialer with dialpad, recents, call stats, contacts with a recycle bin, blocked numbers, island-style call notifications and per-contact call backgrounds.
- Added live offline transcription of the other party during calls with on-device Vosk models, separating far-end from near-end speech by spectral energy on the speakerphone path.

Zajil

Social app; Flutter, Firebase Auth, FastAPI, PostgreSQL; Mar 2026 to Aug 2026, paused; private repos

- Wrote a Flutter app sending personalized quotes to friends' home-screen widgets.

- Built a FastAPI and PostgreSQL backend to replace the app's Firestore data plane, with Firebase ID-token verification and WebSocket push via Postgres LISTEN/NOTIFY (not yet deployed).
- Ported the Dart fuzzy search to Python with 45 pytest conformance cases passing.

MultiTenantManagement

Team graduation project; ASP.NET Core 8, EF Core, PostgreSQL; Jan 2026 to Feb 2026;
[GitHub](#)

- Co-built the Web API in a team of five: system admins create tenants and users, tenant-scoped users manage products, and a tenant_id JWT claim gates every tenant route.
- Designed the commerce data model (Product, Order, OrderItems, Payment, StoreSetting) with its EF Core relationships, and reworked the Tenant and ApplicationUser entities.
- Wrote the project README and consolidated the EF Core migrations into one baseline.

Files

Android file manager; Kotlin; Aug 2026; private repo; [Privacy policy](#)

- Developed an English/Arabic file manager grouping files by the app that produced them, then by kind; no internet permission, no ads, no analytics and no accounts.
- Designed a five-tier attribution classifier (package name in path down to generic-folder guess) that shows which rule fired, since no Android API records the writing app.

Smaller public projects

- [TrendingTracker](#) (Jul 2025): Django/DRF GitHub-trending scraper (requests, BeautifulSoup, SQLite) behind a read-only API.
- [shell2](#) (Oct 2025): UNIX-like shell in C with built-ins, fork/execvp, input/output/append redirection via dup2, and `&` backgrounding.

Languages

- Arabic: native
- English: professional working proficiency
